

# Netflow and IP Flow-Based Network Analysis with Arbor Peakflow

Deployed in over 70 percent of the world's ISPs, Arbor Peakflow® is the de facto standard for NetFlow and IP flow-based network security and network analysis. Arbor Peakflow products are typically deployed in the core to detect, analyze and mitigate a broad range of network threats. Peakflow products provide unmatched visibility and extensive reporting capabilities for making critical business decisions.

## Peakflow SP

Designed for service providers, Peakflow SP is deployed by over 70 percent of the world's leading ISPs—making it the industry's solution-of-choice for ensuring network integrity and availability. Service providers use Peakflow SP for:

- Infrastructure security to proactively monitor, detect and mitigate network-wide anomalies caused by Distributed Denial of Service (DDoS) attacks, botnets and other threats.
- Traffic and routing to improve operational efficiency by analyzing flow data and accurately modeling traffic across the entire network.
- Service delivery to increase profitability with new revenue-generating managed services.

## Peakflow X

Arbor Peakflow X conducts network behavior analysis (NBA) to provide pervasive, cost-effective network visibility and real-time threat detection. This critical business information can be used for:

- Real-time network analysis.
- Historical flow data reporting or capacity planning.
- Simplify auditing requirements for regulatory compliance.
- Prioritizing threat analysis and mitigation.
